SF Diode-Ice Med

The remarkable SF Diode ICE is a laser hair removal system that can treat All Skin Types, including Tanned Skin and All Hair Colours

We are excited and proud of to offer this cutting-edge device for effective, fast and virtually painless hair removal treatments. With advanced cooling technology incorporated, it reduces the risk of burns on the skin and makes the treatment more comfortable for clients.

Our sophisticated technology can now be performed on patients that were previously unable, giving you the edge over your competition. It can therefore massively grow your clientele, which in turn will increase your revenue.

How it Works

The Diode laser use the principle of selective photothermolysis (abbreviated SPTL) to target specific chromophores in the skin, usually melanin or blood. The lasers damage the chromophores by selectively heating them while leaving surrounding tissue unharmed.

When treating unwanted hair, the melanin in the hair follicles is targeted and damaged, which results in the disruption of hair growth and regeneration.

The sweeping technique of moving the applicator repeatedly over the treatment area ensures full coverage while the cooling technology cools the skin surface-preventing superficial burns and allowing for comfortable, yet highly effective hair removal.

Core Benefits:

- Treats ALL Hair Colour
- Treats ALL Skin Types
- Treats Tanned Skin
- Over 10 million laser shots
- -5 degrees cooling system to make the treatment painless and prevent burning
- 10 bar probe – Generates continuous laser beam to reduce treatment time
